HITEN MANDHYAN

Full-Stack Developer | Machine Learning & AI Systems Engineer

Bachelor of Computer Applications | Batch 2024–27 | CHRIST (Deemed to be University), Delhi NCR Campus

hitenmandhyan124@gmail.com • +91-8470837608 • linkedin.com/in/hiten-mandhyan • Delhi NCR, India

PROFESSIONAL SUMMARY

Final-year BCA student (CGPA 8.9/10) with hands-on experience building full-stack and machine-learning systems end-to-end, including Python/FastAPI and React/Next.js, applied ML with scikit-learn and PyTorch, and rigorous testing and evaluation from model training through deployment. Shipped 5 live production deployments as sole or lead developer across fintech, agritech, NGO, and AI platforms, collaborating with cross-functional, cross-time-zone teams across the US and Canada. Strong communicator and fast learner, having trained 500+ students and represented 300+ peers to university administration.

CORE COMPETENCIES

Languages & Frameworks: Python, JavaScript/TypeScript, SQL, FastAPI, React/Next.js, Flask, Node.js
Machine Learning & AI: scikit-learn, PyTorch, Hugging Face Transformers, NLP, AutoML, LLM Integration & Prompt Engineering, Model Evaluation
Data & Systems: Pandas, Power BI, Tableau, Information Retrieval (BM25, FAISS), REST API Design, Relational & NoSQL Databases, Data Validation & Analytics
Engineering Practice: Automated Testing (pytest, Playwright), Git/Version Control, Technical Documentation, IoT Fundamentals

EXPERIENCE

Vortex Fintech, Delhi NCR — May 2026 – Jun 2026
Data & Business Development Associate
- Normalised multi-source client, property, and transaction data in SQL and implemented data validation protocols across 4 reporting cycles, improving data accuracy by 35%.
- Automated a stakeholder performance-reporting pipeline (3x faster delivery), presenting findings to cross-functional business teams and translating raw data into actionable insights.
- Built and maintained a structured client and property database powering the full real estate pipeline, enabling faster lead tracking and more informed business development decisions.

Ometaura AI, Remote / Canada — May 2026 – Jun 2026
Full Stack AI/ML Developer
- Engineered backend services integrating AI/ML pipelines into production systems, optimizing inference performance and reducing response latency by over 40% across 200+ runs.
- Architected and deployed 3+ production-grade web applications end-to-end using Python, JavaScript, and REST APIs, collaborating with US/Canada-based cross-functional teams in an agile remote environment.
- Transformed unstructured model outputs into normalised, queryable datasets and diagnosed process bottlenecks through structured log analysis, directly enabling the 40%+ efficiency gains delivered to the team's AI/ML workflows.

Naintaara (NGO), Remote — May 2026 – Jun 2026
Project Intern | Full Stack Web Developer
- Designed and built a full-featured NGO website from scratch, integrating a secure online payment gateway, donor management, and dynamic content modules.
- Delivered a complete, production-ready platform handling user authentication and real-time data updates, with a mobile-responsive UI directly expanding the NGO's digital outreach and online donation capacity.

Wecncode, San Francisco (Remote) — Mar 2026 – Present
Open Source Developer, La Lango AI (progressed from Campus Ambassador)
- Built and hardened FastAPI-powered REST services with an international, cross-time-zone engineering team, following Git-based workflows and structured coding standards.
- Improved documentation and onboarding tooling for global contributors, ensuring accurate, accessible records for a distributed team.

PROJECTS

PredictWise AI | Python, FastAPI, SQLAlchemy, Pandas, scikit-learn, React, Groq LLM API | GitHub — Jul 2026
- Engineered a full-stack decision-intelligence platform (Python, FastAPI, React) letting non-technical users query their own sales and customer data in plain Hindi or English, with every answer computed live from the uploaded file via an inspectable calculation trace, not generated from an LLM's memory.
- Designed a layered AI architecture (LLM tool-use over sandboxed pandas queries, an offline rule-based analytics engine, and a safe fallback) that keeps the app fully functional with or without an API key, validated by 39 automated backend tests and Playwright end-to-end checks.
- Implemented a cross-validated AutoML pipeline with an explainability and trust layer (per-prediction confidence scoring, Shapley-style explanations, what-if analysis, fairness auditing) alongside business-intelligence tools including demand forecasting, customer segmentation (RFM), and anomaly detection.

SciVerify | Python, PyTorch, Hugging Face Transformers, SentenceTransformers, FAISS, scikit-learn | GitHub — Sep 2026
- Built an NLP research pipeline that retrieves relevant paper abstracts for a scientific claim using Natural Language Inference (NLI) to classify it as supported, contradicted, unknown, or conflicting, benchmarked on SciFact (1,409 claims, 5,183 abstracts).
- Implemented and rigorously evaluated 3 information-retrieval strategies, including BM25, dense retrieval (SentenceTransformers + FAISS), and hybrid fusion, across Recall@1/5/10, MRR, and macro-F1, backed by 53 automated tests and reproducible, YAML-configured experiments.
- Ran systematic ablation studies and error analysis across 300 dev claims, isolating that 88% of model errors occur at the verification stage rather than retrieval, a data-driven diagnosis that directly identified where future optimization should focus.

ResUAI | Next.js, TypeScript, FastAPI, Python, SQLite, JWT | GitHub | Live Demo — Mar 2026
- Built and deployed a full-stack platform with 15+ secure REST APIs, JWT authentication, and multi-LLM routing across Groq, Gemini, and Claude, with an ATS engine scoring resumes against job descriptions.
- Owned the system end-to-end, covering environment configuration, authentication, data storage, and deployment, and shipped it as a live, publicly accessible application.
- Designed the ATS analysis engine to score and optimize resumes against target job descriptions, cutting manual resume-tailoring effort by approximately 80% for users.

CERTIFICATIONS & TRAINING

- Generative AI (Intel Unnati, 2026)
- Artificial Intelligence (Intel Unnati, 2025)
- Privacy and Security in Online Social Media (NPTEL, 2025)
- Python for Machine Learning (Infosys Springboard)
- Internet of Things (Infosys Springboard)

ACHIEVEMENTS & AWARDS

- 2× Merit Scholarship Recipient, CHRIST (Deemed to be University), Delhi NCR, 2024–2026
- CGPA 8.9/10.0, top academic performer, BCA batch 2024–27, no current backlogs
- 5 Live Production Deployments as sole/lead developer across fintech, agritech, NGO, and AI platforms (2025–2026): Swapro • NAIN TAARA Welfare Foundation • Ometaura AI • PalaVita • MotoClub

CO-CURRICULAR & LEADERSHIP

Centre for Academic & Professional Support (CAPS), CHRIST Delhi NCR | Peer Trainer — Aug 2024 – Present
- Trained 500+ students in soft skills, professional skills, and communication, building stakeholder-facing presentation and facilitation experience.

Centre for Placement & Career Guidance (CPCG), CHRIST Delhi NCR | Student Representative — Feb 2026 – Present
- Primary liaison between 300+ BCA students and the Placement Cell, coordinating internship drives and industry talks with recruiting partners.

EDUCATION

CHRIST (Deemed to be University), Delhi NCR | BCA, CGPA: 8.9/10.0 — Jul 2024 – May 2027 (Exp.)
Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Statistics & Probability, Object-Oriented Programming
CBSE, Class XII (Science), 84%, 2024 | St. Joseph's College, Prayagraj (ICSE), Class X, 94%, 2022
